DATAIR Pension Reporter

Hardware & Software Requirements for 2004 5500 EFAST forms

EFAST has announced the following hardware and software requirements for the 2004 plan year 5500-series forms. Since DATAIR employs the EFAST-provided printing and electronic filing component in Pension Reporter, these updated requirements apply to versions of Pension Reporter that include 2004 5500-series forms. We expect that this will be in December 2004 or January 2005.

Operating Systems:

Support for Windows 98 and Windows NT 4.0 will be discontinued. Windows ME, 2000, 2003, and XP are the only supported operating systems for versions of Pension Reporter that include 2004 5500 forms.

Minimum Hardware Requirements:

256 MB RAM
500 MHZ Processor

Recommended Requirements:

512 MB RAM
2.0+ GHz Processor

We realize that these requirements may exceed your current hardware and software, so we wanted to give you as much advance notice as possible to enable you to prepare for the 2004 form year. We apologize for any inconvenience this may cause; however these requirements are dictated by EFAST and not DATAIR.
