

Operating System Support for DATAIR Software

Support for the following operating systems ended on the dates indicated.

Operating System	End-of-Life Date
Windows NT 4	June 30, 2005 (see note 1)
Windows 98	June 30, 2006 (see note 1)
Windows ME	June 30, 2006 (See note 1)

No end-of-life date has been established for the following operating systems

Windows 2000 Pro
Windows 2000 Server
Windows XP Pro
Windows XP Home
Windows 2003 Server

End-of-life dates are generally linked to those announced by Microsoft for the product.

Versions of systems released after the stated end-of-life date may not operate properly on the given operating system. DATAIR will continue to provide support for the previously released version of the software in accordance with our normal policy of supporting only the current and immediately preceding release.

In other words, if version 3.50 is the last compatible version for a given operating system, it will only be supported until version 3.52 is released.

DATAIR recommends Windows 2000 or XP Pro for workstations and Windows 2000 or 2003 Server for servers.

Windows Vista

DATAIR intends to support Windows Vista once the operating system is released in final form. Testing with the pre-release version is currently underway. At this time, Windows Vista is not supported for any DATAIR applications. This document will be updated upon completion of testing and availability of compatible versions of systems.
