PRESS RELEASE

DATAIR Releases PPA Windows Valuation System for Defined Benefit Plans

For immediate release

November 18, 2009

Westmont, IL. - DATAIR has announced the release of its DB System, the next-generation Defined Benefit software for proposals, compliance testing, valuation and administration.

DATAIR's DB System includes PPA funding rules with yield curves, Funding Target and Target Normal Cost, segment rates, automatic rate and yield curve look-ups, at-risk calculations, cushion amount increase, FTAP and AFTAP certifications and notices, and many other features.

The DB System is for TPAs, consultants and employers of all sizes and handles many benefit formulas including those for Cash Balance Plans. The DB System features a scalable SQL database and may be run on stand alone and networked computers. It shares data with other DATAIR Windows systems. DATAIR includes webinar training, expert support and all updates with affordable fees.

DATAIR, founded in 1967, is a leading provider of pension and benefits administrative software. DATAIR offers systems and compliance support for DC, DB and Cafeteria Plan proposals, administration, plan documents, and government forms (5500s, 1099-Rs and 5300s). Additional information and demo software are available at www.datair.com or by calling (888) 328-2474.
